# Super Affiliate Link Manager

## Installation Instructions

If you are installing **Super Affiliate Link Manager** yourself, please follow these instructions. If you have any questions or confusions feel free to contact me at Dustin@SuperAffiliateLinkManager.com

### *Step 1*

Download and unzip the latest version of **Super Affiliate Link Manger**. You should have received download instructions after making your payment.

### *Step 2*

If not already configured, you will need to set up a MySQL database with an associated username and password. As each control panel may be different, if you need assistance with this, please contact your hosting provider.

### *Step 3*

Find and edit *config.php* in your favorite text editor. The following values will need to be set:

- `$config['db_host']`: MySQL host – usually localhost
- `$config['db_name']`: MySQL database name
- `$config['db_user']`: MySQL database user name
- `$config['db_password']`: Password associated with user name
- `$tbl_pre`: prefix that will be applied to all tables. This can be helpful if your database is not dedicated to **Super Affiliate Link Manager** and your are sharing resources
- `$config['username']`: For authentication purposes. Allows you to set a username and password in order to access **Super Affiliate Link Manager**. If you do not set this, anyone may access **Super Affiliate Link Manager**.
- `$config['password']`: Authentication password

### *Step 4*

Upload all files to your web server using FTP or your preferred method of uploading. *.htaccess* should be uploaded to your root (*public_html* or *www*) folder in ASCII mode. If there is an existing *.htaccess* file you should append the contents of the **Super Affiliate Link Manager** *.htaccess* file to your existing *.htaccess* file in order to avoid any adverse effects.

The *salm* folder should also be uploaded to your root (*public_html* or *www*) folder while keeping the same directory structure. (Any change in the folder name will require

modifications to the *.htaccess* file. I do not recommend change the folder name unless you are familiar with regular expressions and mod_rewrite).

For file types *.php, .js, .tpl*, upload in ASCII mode. For file types *.gif, .jpg,* upload in binary mode.

### *Step 5*

On your server, inside the *salm* folder, set the permissions (chmod) for the *templates_c* folder to 777 (Read, write, and execute for user, group, and world).

### *Step 6*

In your browser, open *salm/install.php* (http://YOUR-DOMAIN.com/salm/install.php). This will create you the necessary tables in MySQL and insert default settings.

### *Step 7*

Delete *install.php* from your server. If called again this would erase all information in your database for **Super Affiliate Link Manager**!

That's it! Now just go to http://YOUR-DOMAIN.com/salm/ to begin using **Super Affiliate Link Manager**.
